

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

We routinely monitor for the presence of drinking water contaminants. Our water system recently violated drinking water standards. Although this is not an emergency, as our customers, you have a right to know what happened, what you should do, and what we are doing to correct this situation

Rogers County Rural Water District #2 Has Levels of Total Trihalomethanes (TTHM's) Above Drinking Water Standards

Testing results we received for **April 2019** through **March 2020** show that our system exceeds the standard, or maximum contaminant level (MCL), for total trihalomethanes. The standard or MCL for total trihalomethanes is **0.080 mg/l**. It is determined by averaging all the samples collected at each sampling location for the past 12 months. The level of total trihalomethanes averaged at our system's locations was **0.081 mg/L**

What Should I do? There is nothing you need to do unless you have a severely compromised immune system, have an infant or are elderly. These people may be at increased risk and should seek advice about drinking water from their health care providers.

What does this mean? This is not an emergency. If it had been, you would have been notified immediately. However, some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have increased risk of getting cancer.

CORRECTIVE ACTION

What happened? What is being done? When will the violation be resolved?

We are taking steps to correct this, Rogers County Rural Water District #2 purchases treated water from the **City Of Claremore** Since we purchase water from Claremore and do not treat it, there are limits to what we can do. We have installed equipment to monitor chlorine at our pump station, which can help in the reduction of trihalomethanes. On top of the steps we have already taken. We have been working with Claremore to improve this, while the levels are lower than they have been in the past we still have some work do to on this issue and hope to have it resolved soon.
